EDUCATION

University of Houston, Honors College

Expected Graduation: **Dec 2026**

Bachelor of Science, Computer Science

Relevant Coursework: Algorithms, Data Structures, Operating Systems, Fundamentals of AI, Cybersecurity

SKILLS

Frameworks & Libraries: Node.js, Express, React.js, Django, PyTorch, HuggingFace, scikit-learn

Languages: C++, C, Python, Java, JavaScript, TypeScript, HTML/CSS, SQL, R, AutoHotkey, Batch

Tools & Databases: MySQL, PostgreSQL, Git, GitHub, Azure, Power BI, Power Automate, Google Apps Script

PROFESSIONAL EXPERIENCE

USAA | *Software Engineering Intern*

May 2026 – August 2026

- Engineered event-driven architectures and streamlined data discovery, enabling multi-intern Agile teams to track, document, and integrate reliable event-stream messaging systems across the full software lifecycle
- Develop and optimize user interface components alongside backend components using Java (Spring Boot) and database systems to make Kafka events visible and accessible across USAA
- Managed version control and deployment pipelines using Git and GitLab repositories to build, optimize, and maintain secure, well-documented CI/CD processes

NASA | *Software Engineering Intern*

Jan 2024 – May 2024

- Developed and deployed a database still in active use, enabling personnel to access and analyze over 1,000 NASA-funded R&D projects
- Used Python (mysql.connector, csv) to extract data from a MySQL database, export CSVs, and automate SharePoint integration via Power Automate
- Designed and implemented 20+ dynamically formatted SharePoint columns (color coding, sortable filters) to improve data usability and analysis based on feedback from a team of 12 NASA researchers

Society of Asian Scientists and Engineers (SASE) | *Web Development Officer*

Aug 2025 – May 2026

- Optimized operations for 400+ members by managing digital platforms and integrating automation to streamline communication, event tracking, and data management
- Strengthen chapter engagement and visibility through SEO optimization, custom Discord bots, and coordination of volunteer initiatives and professional workshops such as LinkedIn and resume sessions
- Mentored Web Development Intern through full project lifecycle, overseeing technical deliverables and growth

PROJECT EXPERIENCE

SASE Member Hub | *HTML, CSS, JavaScript, Node.js, Express.js, MySQL*

Aug 2025 – Present

- Developed a platform for paid SASE members that consolidates career resources and an alumni directory with personalized member profiles
- Designed an admin portal that allows officers to instantly update internship listings, research and alumni records

DiFraud Label Noise Analysis | *Python, PyTorch, HuggingFace, scikit-learn*

Oct 2025 - Dec 2025

- Applied Dataset Cartography to analyze label noise and training dynamics on the 95k+ sample DiFraud deception detection dataset, tracking per-sample confidence, variability, and correctness across epochs
- Trained and evaluated DistilBERT, SVM, and MLP models with multiple noise-handling strategies, showing minimal performance gains due to DiFraud being heavily pre-cleaned and architecture-dependent effects

Point Tracking System Automation (SASE) | *Google Apps Script, MySQL*

Jan 2025 - Oct 2025

- Eliminated manual tracking for 400+ members by developing an automated QR code-based attendance and point system that records event sign-ins directly in Google Sheets
- Enabled long-term analytics and year-over-year comparisons by storing past and current event data in MySQL, allowing officers to evaluate event success, track trends, and make data-driven decisions

Reflectra (HackTX 2025) | *TypeScript, Django, PostgreSQL, Render, Vercel*

Nov 2025 - Nov 2025

- Collaborated in a team of three and led backend development, designing and implementing the database schema and API endpoints to enable users to track mood, goals, and well-being over time
- Strengthened user accountability by building goal tracking, reminder, and notification systems, allowing followed users to share progress and check in on each other within a trusted network

CoogMusic | *Node.js, React.js, MySQL, Microsoft Azure, APIs, Axios, Git/GitHub*

Jan 2025 - May 2025

- Developed a Spotify-like music streaming platform for UH students, alumni, and staff, focusing on backend development to handle data flow and user interactions
- Enhanced platform functionality by implementing backend routes and SQL queries that enable secure user authentication, playlist management, song uploads, likes, follows, and album publishing
